Useful information:

- The username's length should be between 8 and 16 characters; the username must contain at least two of the following:
 - Lowercase letter: a-z
 - Uppercase letter: A-Z
 - Number: 0-9
- At first login, a newly created user will use:
 - The username provided by the administrator
 - The password received via email (to the address defined by the admin at sub-user level)
 - The hard token provided by the admin or the iSecure token app
- If the administrator wants to change a user role, then (s)he should perform the following steps:
 - Edit the user (click the three dots under More Actions, Edit or Delete User Details)

Account Linkage

Account Linkage

USER ID: LAST NAME:

FIRST NAME:

TO LINK ACCOUNTS [CLICK HERE](#)

[Back](#)

Useful information:

- This menu allows account assignment for both own and third party accounts (if any); in case the customer has access to third party account(s)
- Once an account is selected, the “Access Level” Access type becomes active, with the following options:
 - No Access: the user not have any access to that account
 - Access + Inquiry: the user will have inquiry access only
 - Transact: the user will be able to initiate payments up to the Entry/Approval Limit Scheme amount assigned to them at user creation
 - Authorize: the user will able to approve payments up the Entry/Approval Limit Scheme amount assigned to them at user creation

Note: the Commercial customer sub-users cannot change the access level rights assigned to them by the administrator

Rule Maintenance

CORPORATE ID:

Select Roles

Rule Description	Rule Hierarchy	Number Of People
General	99	<input type="text"/>
Authorizer	10	<input type="text"/>

[Back](#) [Clear](#) [Continue](#)

Useful information:

- General: not required for corporates
- Authorizer: the number inputted in the 'Number of People' box is the number of approvers required to process a transaction

User Role Maintenance

Transaction Type	Default Rule	Currency	From Amount	To Amount	Applicable Rule	
Initiate Bill Payment	No	BMD	0.00	1,000,000.00	2 Authorizer	⋮
Transaction Type	Default Rule	Currency	From Amount	To Amount	Applicable Rule	
File Upload	No	BMD	0.00	5,000,000.00	2 Authorizer	⋮
Transaction Type	Default Rule	Currency	From Amount	To Amount	Applicable Rule	
Initiate Utility Payment	No	BMD	0.00	1,000,000.00	2 Authorizer	⋮

Page Number **GO** Rows per page: 5 1 - 5 of 8 < >

Useful information:

- This menu is active only for customers with multiple users
- The default values can be amended by clicking on the three dots
- No two rows are allowed to have overlapping or conflicting values (e.g. different signature types for the same amount interval, duplicated rows etc.)
- In order to allow transaction posting, a workflow should be defined for that specific transaction type (in a two/three-level approval setup)

Note: For any new financial workflows, Default Rule is always 'No'

Customer setups (scenarios and examples)

Generically, the steps for customer setup are the following:

1. Define users and their limits roles (Maintain User Access Details)
2. Define approvers (User Role Maintenance)
3. Define signing authority, any one or two signing, (Rule Maintenance)
4. Assign account access (Maintain User Access Details, Account Linkage)
5. Define financial workflows (Financial Workflow Maintenance)

Single-level authorization schema

SCENARIOS:

1. maker and authorizer, for all transaction types and amount limits
2. maker&authorizer, for all transaction types and amount limits

Setup (for both scenarios):

1. Define the user rules (1 authorizer)

Select Roles

Rule Description	Rule Hierarchy	Number Of People
General	99	<input type="text"/>
Authorizer	10	<input type="text" value="1"/>

[Back](#) [Clear](#) [Continue](#)

Two-level authorization schema

SCENARIO 1

Digicel needs to have the following setup:

- For amounts below 1k any one authorizer can sign the transaction
- For amounts above 1k two of the authorizers should co-sign

Setup for scenario 1

The **users and user access** setup is summarized in this table

Username	Role
pholmanbtc	maker
bmurphybtc	authorizer
rsealebtc	authorizer
jnelbtc123	authorizer
mlierouxbtc	authorizer

There will need to be two Rules created, one for 1 authorizer and another for 2 authorizers.

Rule Maintenance			
Rule ID	Hierarchy	Rule	
311	No	1 Authorizer	⋮
2	No	2 Authorizer	⋮

The workflows ensures that the customer setup is implemented, as follows:

- For amounts below 1k any one authorizer can sign the transaction.
- For amounts above 1k two of the authorizers should co-sign

Financial Workflow Maintenance					
Transaction Type	Default Rule	Currency	From Amount	To Amount	Applicable Rule
Other Bank Transfer	No	BMD	0.00	1,000.00	1 Authorizer
Other Bank Transfer	No	BMD	1,000.01	5,000,000.00	2 Authorizer

SCENARIO 2

Regulatory Authority needs to have the following setup:

- One inputter (just maker) and one authorizer (Authorizer) for transfer up 250k (inputter cannot approve their own transfer)
- One inputter (just maker) and two authorizers (Authorizer) for transfer over 250k (inputter cannot approve their own transfer)

Setup for scenario 2

The **user access** set up for this company are:

- kmartinsra (Maker)
- pdavisrab2 (Authorizer)
- kmasterrab1 (Authorizer)

Reasoning: the fact that the approver should be always different from the inputter call for an Authorizer instead of a Maker & Authorizer.

Financial Workflow Maintenance						
Transaction Type	Default Rule	Currency	From Amount	To Amount	Applicable Rule	
Other Bank Transfer	No	BMD	0.00	250,000.00	1 Authorizer	⋮
Other Bank Transfer	No	BMD	250,000.01	5,000,000.00	2 Authorizer	⋮

The workflow setup ensures that each of the two authorizers can individually sign a transfer below 250k, while for transfers over 250k they would need another authorizer to co-sign.

Since the Maker is not listed as an Authorizer under Role Maintenance, their inputting of the transaction does not count as first authorization.

Manage Beneficiary Linkage

When creating or modifying a Beneficiary you have the option of making that beneficiaries Access Level to be Global or Local

- Global = all users can see and have access to that beneficiary
- Local = no users have access and individual users can be assigned to that beneficiary for use

TRANSFERS

To have them linked, click on the grey check mark for the user which will turn green and click the double arrows to send those selected users to the left side under Users Linked

The interface consists of two main panels: 'Users Linked' on the left and 'Users Not Linked' on the right. The 'Users Not Linked' panel contains a 'Select All' button with a green checkmark and three rows of user information. Each row has a 'Select' button with a green checkmark and a 'User ID' field. The user names are ADMIN, HOCVC, and VC. A yellow double-left arrow button is positioned between the panels, indicating the action to move users from the right to the left.

Once moved over, click Continue

The interface now shows the 'Users Linked' panel with five rows of user information. Each row has a 'Select' button with a green checkmark and a 'User ID' field. The user names are CVCADMIN, CVC, ENCVC, and C. The 'Users Not Linked' panel is now empty. At the bottom right, there are two buttons: 'Back' and 'Continue'.

Check that the linkage is correct, add remarks if you wish and click Submit
